Abstract:

The present invention discloses a system for Knowledge representation using geometric flexible adaptable templates by using machine learning interfaces. The system includes, but not limited to, at least one processor; at least one non-transitory computer readable storage medium storing instructions thereon, that, when executed by the at least one processor, cause the system to: a set of navigational points for defining and retrieving objects based for knowledge representation on a resource locator thereof through a machine learning based user interface; an object search engine for selecting a set of objects according to a user-defined content criterion using an adaptable plurality of templates and returning respective resource locators of selected objects, and further, employing a plurality of schemes for selecting objects.
